drain tissues and return blood to the heart. Low pressure vessels so they have thinner walls. Lumens are larger than arteries however and valves in larger veins prevent backflow of blood. This is because blood returning to the heart often flows against gravity, so lumen has to be bigger to keep up with cardiac output.

Exercise 32 - Anatomy of Blood Vessels Flashcards | Quizlet

Hormones and local chemicals also control blood vessels. Together, these neural and chemical mechanisms reduce or increase blood flow in response to changing body conditions, from exercise to hydration. Regulation of both blood flow and blood pressure is discussed in detail later in this chapter.
