An ABX test is a
method of comparing
two choices of sensory
stimuli to identify

detectable differences between them. A subject is presented with two known samples followed by one unknown sample X that is randomly selected from either A or B . The subject is then required to identify X as either A or B . If X cannot be identified reliably with a low p -value in a predetermined number

used, they can cause side effects and lead to antibiotic resistance.

Since the 1940s, antibiotics have greatly reduced illness and death from infectious diseases. However, as we use the drugs, germs develop defense strategies against them. This makes the drugs less effective.
