Graph theory is based on the graphs. The graphs are structures that we take into account for demonstrating pairwise relations between different objects. The graphs are made of nodes, vertices, or points. Edges, lines, or links provide the connection between

This is a superb first introduction to graph theory. It's highly accessible and easy to follow; personally, it helped me get interested in a topic I thought I hated but realized after study that I just hadn't had a good introduction to it.
