strength and does not cause the shutter to stick on the seat. The shutter is properly guided in the body and the guide action cannot fail.

HANDBOOK - Castel Srl

Introduction A pressure relief valve is a safety device designed to protect a pressurized vessel or system during an over- pressure event. An overpressure event refers to any condition which would cause pressure in a vessel or system to increase beyond the specified design pres- sure or maximum allowable working pressure (MAWP).

Information - Serkon

Industry leading pressure and safety relief valve designs with over 140 years of technical and application expertise providing custom engineered solutions for O&G, Refining, Chemical, Petrochemical, Process and Power applications. Our designs meet global and local codes and standards (API 526; ASME Section I, IV & VIII; EN ISO 4126; PED & more). Gain insight into the performance of your pressure relief valves with wireless monitoring.

The compact spring-loaded safety valve is made of stainless steel (1.4571) for high chemical resistance. It is also available with bellows to balance back pressure and for high tightness to the outside, even at higher back pressures. The safety valve has a variety of connections and is wear resistant with hard-faced seat.
